

DATA+

Data+ provides clarity for your fleet and mobility needs by consolidating data from suppliers, partners and internal departments. Data+ provides you with a single view of your fleet and mobility supply chain, with analysis and data mining tools to help you achieve the most from your information.

.....

Data+ reduces administration, provides cost efficiencies and gives clarity so businesses can make informed strategic decisions about their fleets.

One size doesn't always fit all, and Data+ enables businesses to use multiple fleet, fuel and telematics providers, enabling like for like comparisons by consolidating data from all suppliers into one simple global tool.

How does it work?

DATA CONSOLIDATION - we manage the daily, weekly or monthly import of data. We map this data to a common definition so we can compare different data from multiple suppliers.

DASHBOARD - the consolidated data is reported via a dashboard, tailored to your requirements. The analysis can be drilled down to individual vehicle/user level.

- For fuel data, the dashboard enables analysis of spend down to individual transaction level and allocates spend to vehicles and/or users.
- For telematics data, the dashboard allows analysis of trips, vehicle utilisation and allocates each trip to the vehicle/user.
- For fleet data, the dashboard provides consolidated cost and vehicle information across suppliers and markets allowing analysis of leasing company, lease costs and Total Cost of Ownership and can be filtered to individual vehicle and/or user level.

The Audit

Using the insights we gain from the data, we can provide consultancy on the planning and implementation of fleet and mobility strategies and sustainability projects.

If there is something you would like to know about your fleet, we can interrogate and analyse your data to give you the answer.

Outputs include:

- Powertrain choice and selection
- EV and plug-in evaluation, strategy and policy
- The right car for the right job and job need assessment and eligibility
- Mobility assessment and transport choice
- Asset utilisation and optimisation
- Global carbon, and NOx contributions and reduction strategies

Additional services

Payroll Reporting and Consolidation – in addition, we can provide payroll files for fringe benefit, private use contributions, reimbursements and deductions.

Invoice Validation and Consolidation – we can also check all invoices against contract terms and internal policy and manage any queries directly with the fleet supply chain. We provide a monthly authorisation payment file to enable suppliers to be paid.

Data+ removes the heavy administrative workload of managing multiple suppliers and provides clear detailed analysis that can be used to steer your fleet strategy.
