

Mobility+

Manage all your business-related travel costs via a single dashboard

Mobility+ takes direct data feeds from all suppliers involved in business travel and leasing, then audits and consolidates it to give you complete visibility of your employees' business travel.

By overlaying travel information with employee data, including information such as whether individuals are home or office based, Mobility+ can give you a 360-degree view of each employee's business travel profile and cost.

How does it work?

Mobility+ features a dashboard to enable employees to keep track of their spend and stay within any specified mobility budget. The service is pan European and is designed to help businesses optimise their mobility mix and manage their Total Cost of Mobility.

The system can also make recommendations to optimise mobility at both company and individual level, based on employee travel patterns. Recommendations include who should or shouldn't be eligible for a company car; who could be in electric vehicles; who could be car sharing, and where it could be more cost-effective to give someone a transportation allowance rather than a conventional car or cash allowance.

Mobility+ brings all your business travel data together including vehicle leasing costs, SMR, accident costs, fuel, hire cars, hotels, trains, planes, meals, car parking, tolls and fines, to allow you to truly understand your mobility costs. It also provides outputs to identify cost savings, improve policy and reduce carbon.

If you'd like to know more, we'd love to hear from you.
