

Mileage Track

TMC's industry leading app

Mileage Track is an industry leading app that accurately records mileage. Mileage Track couldn't be easier for drivers to use on the go and works for both pay and reclaim and fuel card drivers alike.

Standard App Features

Mileage Track includes a range of standard features that make your drivers' lives easier.

These include:

- Tracking business journeys by GPS
- Ability to manually input business trips
- Uploading VAT receipts
- Closing off mileage with an end of month odometer reading to work out the business to personal split

Key Functionality

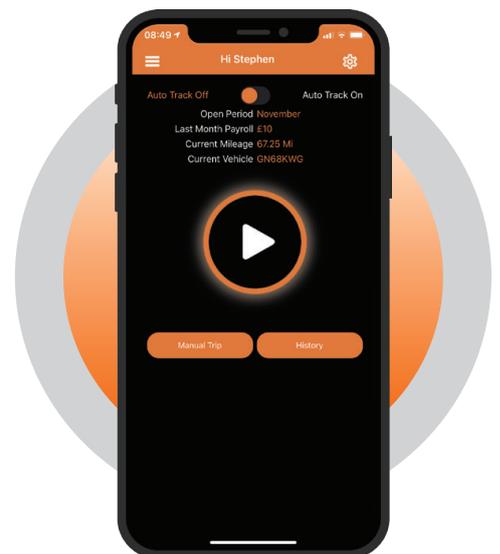

Journey Tracking

Drivers can use the stop/start functionality to record their trips. They simply click the 'start' icon in the main dashboard to begin their trip, and the 'stop' icon to end it.

On this dashboard drivers can also see their mileage to date for the month and the amount to be reimbursed or deducted.

There is also the option to input journey details manually.

Journeys can be tracked automatically by connecting of the device and app to the vehicle's in-car Bluetooth. The app starts recording the trip once the vehicle starts moving.

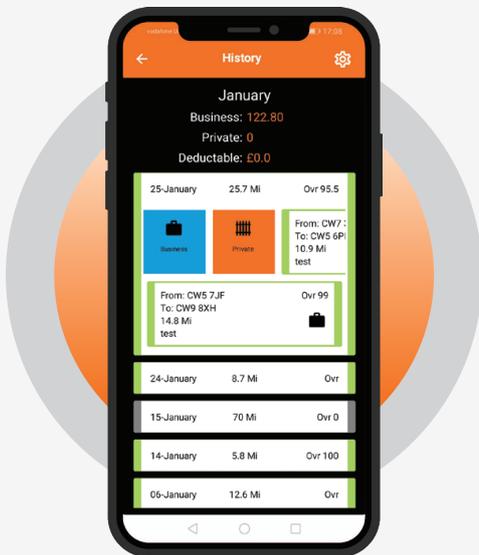

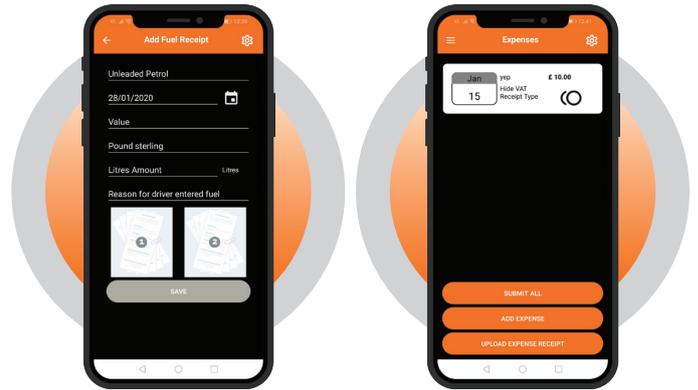

Uploading Fuel Receipts & Expenses

Drivers can seamlessly upload their fuel and expense receipts using the app.

With no need to connect to a PC, receipts can be scanned directly into the app using the device's camera and our advanced OCR technology. Employees can upload their data anytime, anywhere.

Once submitted these are sent straight to the relevant line manager for approval.

Fuel card transactions will automatically be synced to the app, keeping drivers' key information in one place.

Trip History & Classification

Drivers can view their trip history easily via the app. Journeys can be filtered down by year, month, and day to access individual trips.

Purposes can be added to each trip before they are submitted, and drivers can also reclassify trips as commutes or private mileage. Trips marked as private will be removed from the system.

Multiple trips recorded within a single journey can be merged prior to submission (e.g. stopping for fuel on a long trip), ensuring logging mileage is simple, clear and straightforward.

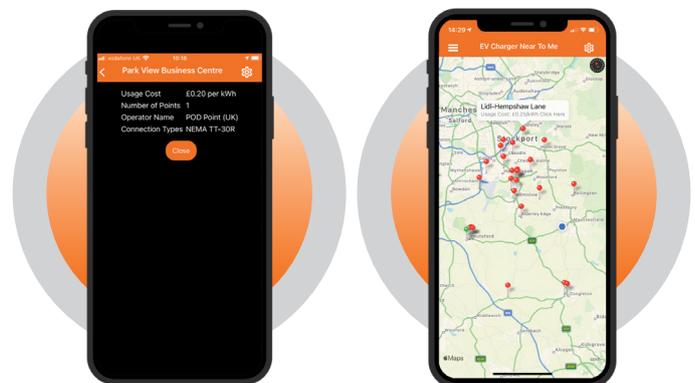

It's also simple to add and change vehicles directly from the app.

Electric charge point finder

To make it easier for EV drivers to charge whilst on the move, the app also includes a public electric charge point finder.

Using the device's location, the app shows the nearest public charging stations using red pins.

When the user clicks on a red pin, they can see the cost to use the charge point, the number of charge points at the location, operator name and connection types.

Compliance+

The app also links with our **Compliance+** service, making it easy and seamless for employees to upload and complete all of their required occupational road risk and duty of care documentation.

Using the app, drivers are able to input their own or their nominated driver's licence details to initiate a driving licence check, upload their insurance documents, and complete their vehicle safety checks and risk assessments. MOT details are automatically checked online with the DVLA.

You can also set up our app so that before your drivers can log mileage, they must accept your fleet policy.

Reporting

Odometer readings

At the end of the month, drivers are asked to input their odometer reading so that their business/private split can be calculated.

After auditing every business journey, TMC provide a payroll file to the business to enable the reimbursement of business miles or deduction of private mileage for fuel card users.

We can reimburse electric vehicle drivers for domestic electricity used to charge the vehicle and/or public charging.

Management reporting

The data we collect through the app means we hold a wealth of valuable information about each fleet.

We present this back to the client via an interactive online dashboard to help the business further manage fuel spend, CO2 emissions and driver safety. This information can be seen at company, department or individual level.

Mileage Track+

If you are looking for additional services to gain visibility of your drivers' safety and wellbeing, then **Mileage Track+** is the perfect solution for you. **Mileage Track+** includes all the functionality of **Mileage Track**, but with advanced behaviour scoring.

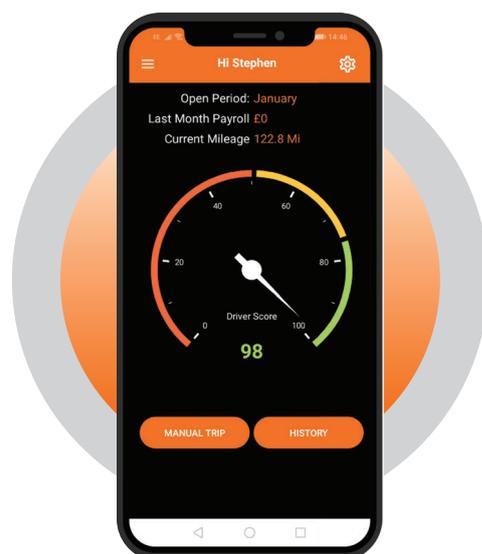

Driver Behaviour Scoring

Mileage Track+ works by capturing data from the device's in-built accelerometer, gyroscope and GPS to report on a driver's:

- Speeding
- Acceleration
- Braking
- Cornering
- Phone interaction (excluding Bluetooth calls)

The driver receives a score for each of the above metrics and is given an overall score out of 100 for each trip.

The colour coded scoring shows either 'excellent', 'average' or 'could do better' and a weighted average is created and shown on the dashboard.

Reporting

All driver scoring is consolidated in online dashboards, which you can use to analyse the safety and performance of your fleet.

Monthly league tables can also be sent out to your drivers so they can compare their driving behaviour against their peers.

Drivers can also see how they are performing via the app.

We'd love to tell you more about these new and exciting features, so please get in touch with us today for more information.
