

Vehicle checks

Regular, audited vehicle inspections are a fundamental element of fleet management.

Organisations need to be confident that their inspection process is robust to ensure that the vehicle being used, whether a company, grey fleet, rental or pool vehicle, is safe to drive.

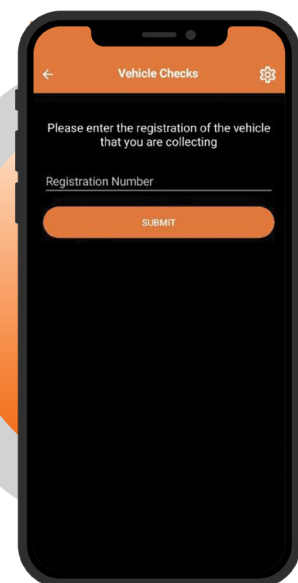

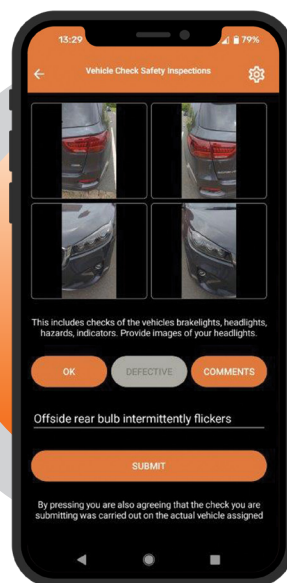

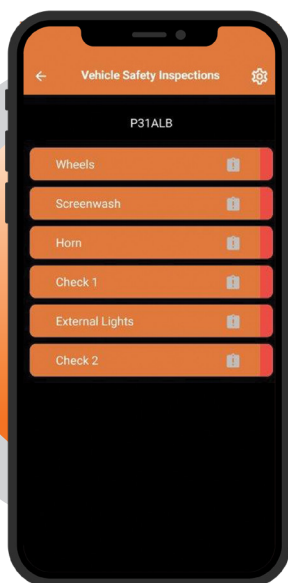

The good news is, drivers can now carry out comprehensive vehicle checks via TMC's app. No more paper work.

You can select what checks the driver should carry out, from a comprehensive list, and at what frequency.

The results are reported back to the business in real time, confirming the vehicle is ok to drive, or flagging any maintenance issues.

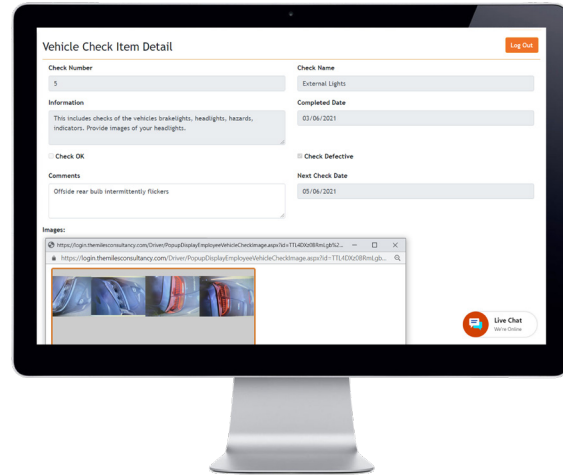

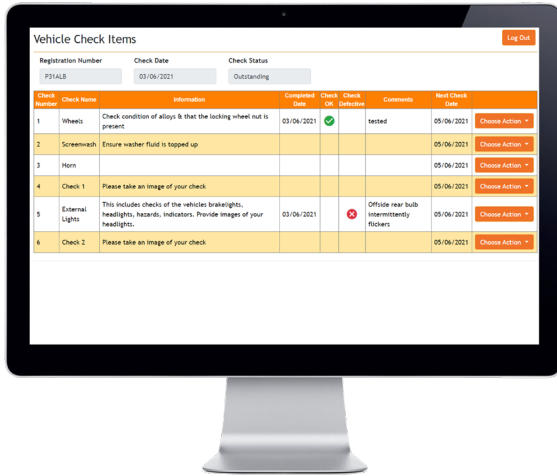

How does this work?

- ▶ Drivers receive a notification on their app to carry out a check.
- ▶ Driver confirms they have completed the check. They can add comments and upload photos if required.
- ▶ The vehicle check functionality can also be used for picking up/returning vehicles.

- ▶ The outcome of all the checks is reported in real time via the Fleet Manager dashboard.

- ▶ The Fleet Manager can view any photos or comments uploaded by the driver.

The vehicle checks are designed to:

- ▶ Eliminate paper checks
- ▶ Ensure all vehicles are fit for the road/purpose/job role
- ▶ Provide an online auditable trail of vehicle checks
- ▶ Flag maintenance issues
- ▶ Improve visibility and safety of your fleet and drivers.

TMC will send reminders to drivers where checks are incomplete.

Vehicle checks are part of TMC's Visa to Drive service, which uses our technology and team of expert auditors to collect, collate and verify your employees' documentation to fulfil your duty of care obligations. Visit our website to find out more.

We'd love to hear from you.
