

Sunbelt Rentals

Case Study

Equipment rental specialists Sunbelt Rentals joined forces with TMC in June 2022 for mileage capture, audit and payroll purposes. A mixed fleet of fuel card users and cash allowance drivers require a simple mileage logging process, whilst Sunbelt needed to find a way to reimburse their ever-rising EV population fairly and adequately.

By using TMC, employees are able to view their mileage submissions, fuel spend and relevant payroll information including reimbursements/ deductions on their individual user accounts, digitalising the whole process.

Managers are also able to view mileage, fuel and compliance figures for all of their employees on one platform, including information on CO2 emissions and sustainability, via their online dashboard.

The Mileage Capture Process

The mileage logging process for Sunbelt employees remains the same regardless of vehicle type. Drivers use the mobile app 'Mileage Track' or the online portal to record each business journey undertaken; the mobile app allows drivers to start and stop at the beginning/ end of their trip to track mileage driven via GPS, whilst online system allows them to manually log trip information.

Drivers are also able to manually log business journeys using the app if they prefer.

At the end of each month, prompted by TMC, drivers submit an odometer reading to close the period and calculate private mileage. The TMC team conduct audits on business mileage and fuel/ electric spend to ensure accuracy and compliance; where there are discrepancies, they contact the driver directly to resolve.

The ability to flex how we reimburse colleagues using the AER was a key player...

Electric Vehicles

Sunbelt's car policy is to run a 100% electric vehicle (EV) or plug-in hybrid electric vehicle (PHEV) fleet and with the 2030 ban on ICE vehicles in sight, the number of employees taking on these vehicles continues to grow. With this came the need to ensure that these drivers are reimbursed fairly, so that the change to EV is seen as a worthwhile benefit rather than a hindrance. That's where TMC came in.

TMC were able to create a tailored electric vehicle scheme that enables drivers to be reimbursed at actual cost by looking at the individuals home tariff rate, the total kWh used throughout the month, the mileage driven and any public charging purchased. The reimbursement rate is then calculated per driver based on the information provided to us and is a fair yet compliant way of managing employee electric vehicle costs.

Sunbelt wanted to reimburse their employees at true cost given the difficulty with reimbursing EV drivers at the HMRC advisory electric rate. TMC's ability to do this was a bigger reason for the formed relationship according to David Phillips, Operations Director - Sunbelt 3.0.

"The ability to flex how we reimburse colleagues using the AER was a key player in decision to go with TMC. We were also pleased with the way that TMC took ownership of our employees to provide them with the knowledge and expertise of mileage claims relating to electric vehicles."

The Payroll

A big benefit of the TMC relationship is down to the payroll. Sunbelt Rentals receive a monthly ready-made payroll file that details the deduction or reimbursement due for each employee. The different user types and vehicles mean that there are different payroll calculations, yet TMC incorporate all of this into one file to streamline payments and take the administration work away from the client.

Alongside payroll, TMC provide reporting to our customers that help steer policy and overall strategy. Line manager reports are sent monthly to summarise driver activity alongside our online portal which allows nominated managers to have sight of all things TMC, including the ability to produce and download their own reporting.

For more information on how TMC can help you, please don't hesitate to get in touch.
